

Dear cottage renters/visitors,

Our lake is in a fragile state. We are currently combatting an invasion of **Eurasian milfoil**, which is a highly aggressive, fast spreading aquatic plant. Please help us preserve the health of our lake by following these simple recommendations:

- **Wash all boats (including canoes and kayaks and water toys) thoroughly** before putting them in the water. Cross-contamination between lakes contributes to the spreading of the Eurasian Milfoil.
- **Avoid boating, fishing and swimming** in all areas marked by a buoy and areas dense in weeds. Any movement contributes to fragmentation and spreading of the weeds.
- **Do not pull out weeds by hand** in shallow areas, as it will contribute to fragmentation and spreading of the weeds.

The water is tested regularly and is rated excellent for swimming.

Enjoy your holidays!
